- Purpose Statement(What are we talking about?)
- Tell your story(with data)
- Conclusion
- Appendix

What are we talking about?

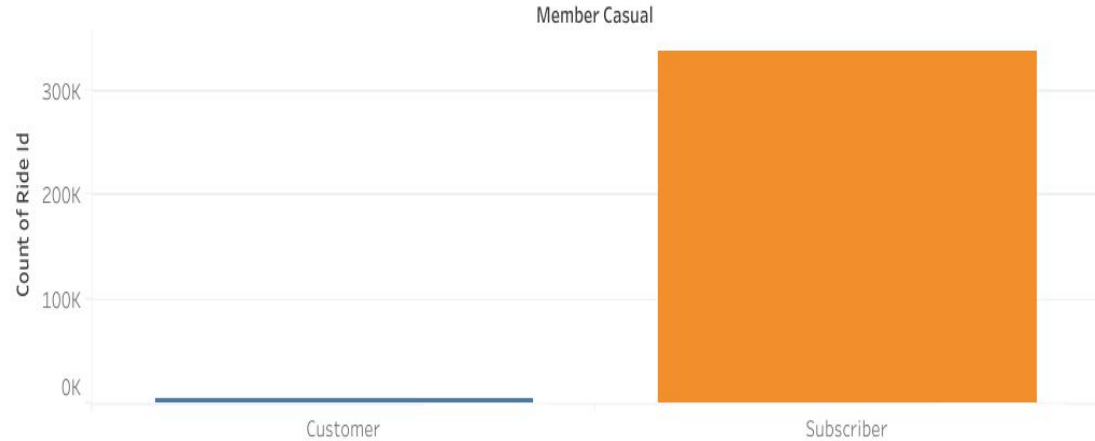

Objective

To Analyze the usage patterns of Cyclistic bike-share users, compare behavior between annual members and casual riders for better marketing insights.

User type comparison

- Annual members take significantly more rides than casual riders.
- Members use bicycles more frequently for regular travel
- Casual riders represent lower but flexible, non-commuting usage

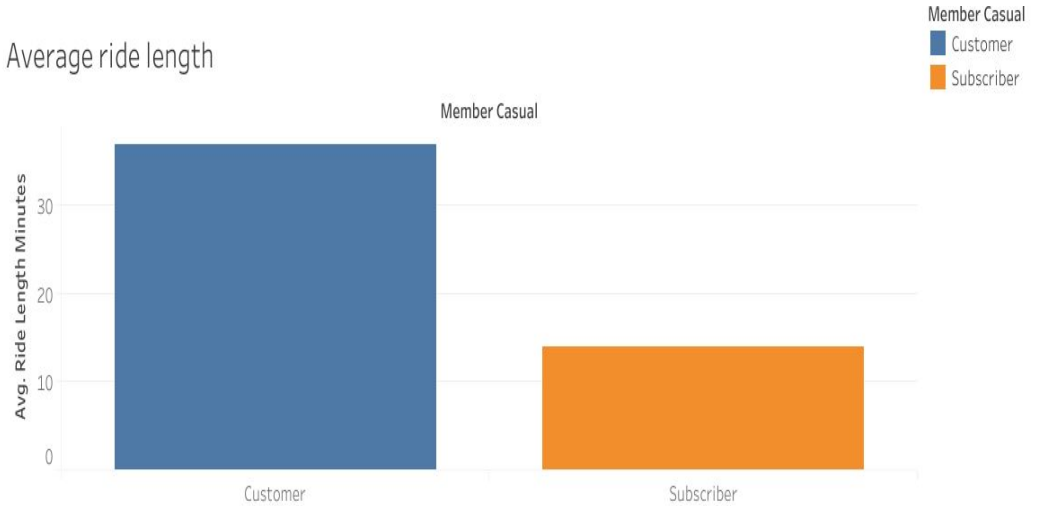

User type comparison

Average Ride length

- Casual riders have longer average ride durations than members
- Members typically take shorter, routine trips.
- Casual usage suggests leisure or recreational travel patterns.

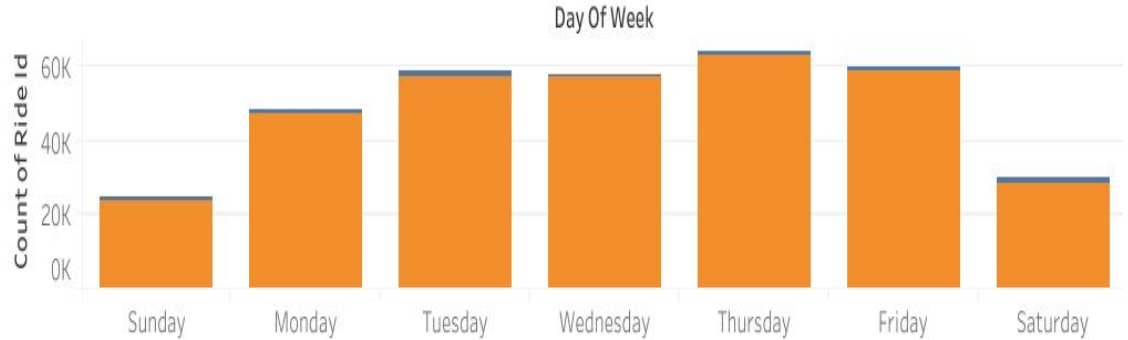

Average ride length

Weekly usage pattern

- Members are most active on weekdays.
- Casual riders show higher usage during weekends.
- Clear difference between commuting(members) and leisure use(casual).

Weekly usage pattern

CONCLUSION

Conclusion

1. Members take more rides than casual riders. This shows members are regular users of cyclistic. Casual riders have longer ride durations than members. Members usually take shorter, routine trips.
2. Members ride mostly on weekdays, casual rides on weekends. This shows commuting vs leisure usage behavior.
3. Members use cyclistic more frequently for daily commuting, Casual riders take longer rides mainly for leisure and weekends. Clear behavior differences help design marketing strategies to convert casual users into members.

THANK YOU
